Kardan

The cardanic suspension was named after the Italian physician and mathematician Geronimo Cardano (1501-1576). The cardanic suspension was originally a technical device for holding measuring instruments such as a ship's compass while allowing free rotation, independent of any external movement. Technically speaking it is a metal ring inside which two further metal rings are mounted one inside the other on pivots oriented at 90° to each other. The measuring instrument is then fastened to the inner ring.

Cardanic Projection Spots

Scenic lighting is used in many architectural applications. Directional spotlights are not only used in retail lighting but also wherever areas are to be visually divided into different zones of illumination. For this purpose we offer a complete product line. This luminaire family contains recessed and surface mounted luminaires, floor and pendant luminaires. Available as 1- to 4-flame, as single luminaire or as system luminaire with an unlimited quantity of light sources.

Cardanic Floor Luminaire

Multi-flame luminaire unit which can be flexibly used as a floor luminaire. Luminaires available complete with mains plug and integrated electronic control gear.

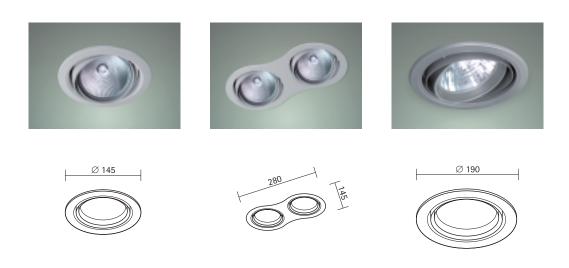

Recessed Cardanic Luminaire Square recessed luminaire with light trap. Black inner body, the luminaire elements are available in silver C3 or any other RAL colour. Changing reflectors in removable anti-glare cone.

Recessed Cardanic Luminaire Round recessed luminaire with spring fastening. Luminaire elements available in silver C3 or any other RAL colour. Changing reflectors in removable anti-glare cone.

Recessed Cardan

Minimalistic housing with decorative, flat surround. The luminaire head is cradled on a cardan joint and can be tilted to all sides. The reflectors are optionally available in three different beam characteristics: flood, medium or narrow. Equipped for 20-70W CDM-TC lamps. With separate electronic control gear unit. 1- to 6-flame luminaires are available as standard. Special layouts can be realised without problem. The electrical connection to the separate control gear is made without tools using the ST18 plug-in system. Changing reflectors enable multi-flame luminaires to be fitted with reflectors with different photometric properties. A later exchange or replacement of reflectors is possible.

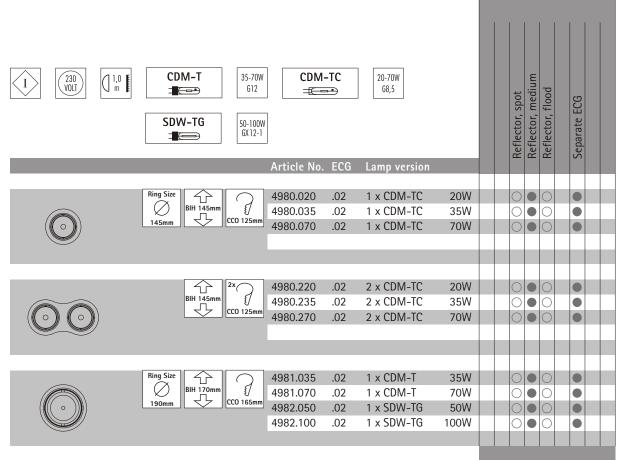

Choice of Reflectors

For these luminaires reflectors with 24° = medium beam angle are supplied as standard. However, a choice of beam angles is available (spot, medium or flood). Reflectors changeable. If medium is not required, please indicate when ordering.

To specify the choice of reflector, please add:

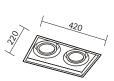

S = Spot M = Medium F = Flood

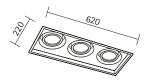

Recessed Kardan

Recessed Cardan

Recessed cardan with cone tiltable to all sides. The cone and the tiltable luminaire insert form a subassembly and can be removed tool-free to enable installation and repair. The reflectors are optionally available in three different medium or narrow. Equipped for 20-70W CDM-TC lamps. With separate electronic control gear unit. 1- to 3-flame luminaires are available as standard. Special layouts can be realised without problem. The electrical connection to the separate control gear is made tool-free using the ST18 plugin system. Interchangeable reflectors enable multi-flame luminaires to be fitted with reflectors with different photometric properties. A later exchange or replacement of reflectors is possible.

Choice of Reflectors

For these luminaires reflectors with 24° = medium beam angle are supplied as standard. However, a choice of beam angles is available (spot, medium or flood). Reflectors changeable. If medium is not required, please indicate when ordering. ► To specify the choice of reflector, please add:

Recessed Cardan Luminaire, Square

Tiltable to all sides. Cone removable tool-free. Beam angle characteristics in spot, medium or flood. Luminaire for one CDM-T 35W or 70W with separate electronic control gear. Up to 4 luminaire units can be mounted in one enclosed, recessed body made of a black powder-coated light trap. A special spring fastening allows the adjustment of the previously installed luminaires. The electrical connection to the separate control gear is made without tools using the ST18 plug-in system. Interchangeable reflectors enable multiflame luminaires to be fitted with reflectors with different photometric properties. A later exchange or replacement of reflectors is possible.

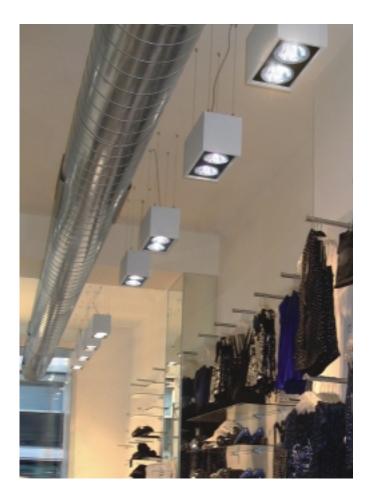

Choice of Reflectors

For these luminaires reflectors with 24° = medium beam angle are supplied as standard. However, a choice of beam angles is available (spot, medium or flood). Reflectors changeable. If medium is not required, please indicate when ordering. ► To specify the choice of reflector, please add:

BOXs

This surface-mounted and pendant version arose as a custom project solution and now forms an addition to our successful cardan product range. Stripped to the bare essentials and manufactured as if from one piece, this product is discreet and unimposing. The housing is greatly reduced and therefore harmonises well with all areas. The special thermal management has enabled all electronic components to be integrated in the housing.

Choice of Reflectors

Various beam angles are available. Changing reflectors enable multi-flame luminaires to be fitted with different reflectors. For these luminaires reflectors with 24° = medium beam angle are supplied as standard. However, a choice of beam angles is available (spot, medium or flood). If medium is not required, please indicate when ordering.

Pendant Kardan

Pendant Cardan Luminaires, CDM-TC

CDM-TC are the lamps with the smallest arc tube chamber within the Master Colour family of Philips. For this reason a very high light intensity can be produced. The high luminous efficiency together with a long lamp life result in low operating costs. The colour temperature of 3000°K and a very good colour rendering are the optimum for scenic retail lighting.

Pendant Cardan Luminaires, CDM-TC Aluminium and steel luminaire body. Silver anodized aluminium reflectors. Choice of several beam angles is available. Complete with integrated electronic control gears, suspension with fast tensioning system and supply cable. Luminaire can be suspended

System Luminaire

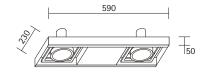

In addition to the previously mentioned individual luminaires, this product group is also available as system luminaire. Luminaires can be produced as continuous elements. For this it is necessary to know:

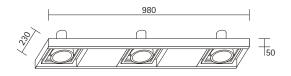

- overall system length
- required light source
- luminaire distance to each other

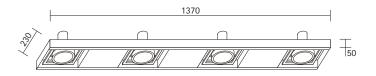

Systems also available with fluorescent lamps T5 direct or direct/indirect with either louvre cover, acrylic cover or as free projection, in addition PL downlights and wall mounted floodlights can be square and integrated. A selection of technical accessories such as loudspeaker, fire alarm, sprinkler and monitoring camera units is available.

Pendant Cardan

Luminaires, CDM-TC Aluminium and steel luminaire body. Silver anodized aluminium reflectors. Choice of several beam angles is available. Complete with integrated electronic control gears, suspension with fast tensioning system and supply cable. Luminaire can be suspended either level or inclined.

Choice of Reflectors

For these luminaires reflectors with 24° = medium beam angle are supplied as standard. However, a choice of beam angles is available (spot, medium or flood). Reflectors changeable. If medium is not required, please indicate when ordering.

To specify the choice of reflector, please add:

BRITE

BRITE

This luminaire was developed for the innovative, miniaturized metal halide lamp BriteSpot ES50. With only 35W and 38° beam angle this lamp reaches 4000cd, together with a colour temperature of 3000°K. This lamp is perfectly suited to use in shop areas. The luminaire's characteristic is the refining scotched aluminium surface which appears extraordinarily metallic and precious.

CDM-TM, Spot

The new Philips CDM-TM lamp was integrated during further development of our Mini Cardanic series. Changing reflectors are available to meet required illumination tasks. Alternatively these luminaires are available for halogen lamps.

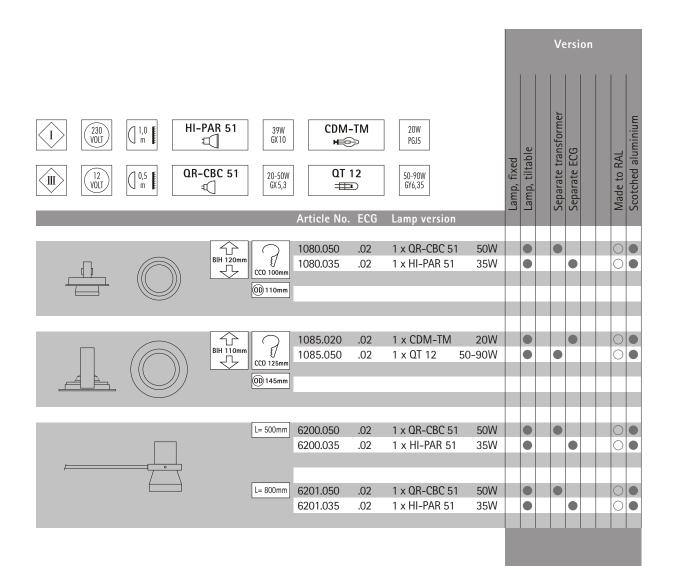

Scotched surface

Swivel arm luminaire tiltable and turnable. Massive aluminium scotched and zaponized, alternatively with powder-coated finish. Complete with separate electronic control gear.

TRENAR

TRENAR

A highlight of shop illumination. CDM lamps of the Master Colour family from Philips are being used here. The lighting of sales areas is optimized through 3000°K colour temperature and very good colour rendering. Special scenic effects are achieved by using reflectors with various beam angles.

Overall projecting wallwasher; tiltable on one side together with a spotlight luminaire to illuminate surfaces and walls. Thus confined surfaces become visible and cave effects can be avoided.

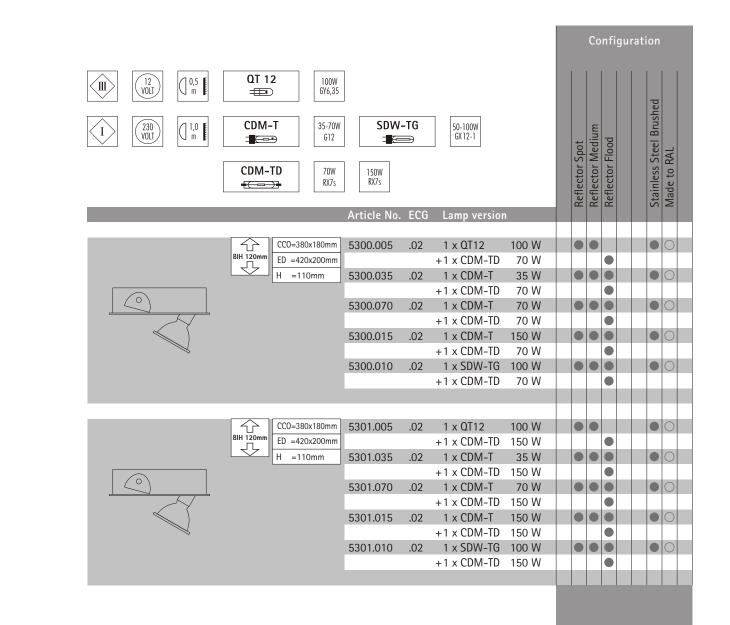

Fully tiltable Spotlight luminaires can be used for scenic space effects. The option of using reflectors with various beam angles, in particular, creates a high suspense when illuminating surfaces and rooms.

TRENAR

Adjustable wallwasher and an overall tiltable spotlight luminaire for CDM-T or Halogen lamps situated in a flat recessed housing. Stainless steel brushed corpus surface. Grain 240. Complete with separate electronic control gear. Beam angle of each spotlight luminaire can be freely selected.

TRENAR

Two overall tiltable spotlight luminaires for CDM-T or LV Halogen lamps situated in a flat recessed housing. Stainless steel brushed corpus surface. Grain 240. Complete with separate electronic control gear. Beam angle of each spotlight luminaire can be freely selected.
